At Missoula Concrete Construction we have an excellent installation team and the process takes very little time. View the [excavation specifications](#) for information on how to prepare the job site. A concrete vault is installed in the ground and a Butyl rubber seal is used to secure the building on top of the vault.

Delivered Ready to Install, Built to Last

Precast Concrete Durability

Our concrete buildings are prestressed with high-tensile strength (270 ksi+) 7-wire, steel strands that are pretensioned and cast into the concrete. The combination of durable concrete and high-strength steel results in reduced cracks, increased load carrying capacity, and a long life span.

-  **Extreme Environmental Resistance**
-  **Vandal and Fire Resistance**
-  **Pest-Proof & Rot-Free**
-  **Minimal Maintenance**

Odor-Reducing Technology

Our buildings feature an odor-reducing ventilation system that uses passive airflow and vent pipes to draw odors up and away from vault toilets, creating an odor-free environment in parks and remote areas. An optional solar fan is also available for additional odor control.
